

BIOOME WORLDS

Name _____

PROJECT CRITERIA

Today's Date: _____

Due Date: _____

GOAL: Produce an interactive poster project to creatively teach others about a biome on earth. The project will demonstrate understanding of biomes and the ecosystems within the your biome.

Terminology to know, understand, and use:

Ecosystem Interactions Adaptations Niche Predator/Prey Energy Flow	Producer (autotroph) Consumer (heterotroph) Herbivore Carnivore Omnivore Scavenger Decomposer	Food chain Food web Climate Temperature Precipitation
-----------------------------------------------------------------------------------	-----------------------------------------------------------------------------------------------------------------	-------------------------------------------------------------------

Required elements to include in the project:

- The general **climate** of the biome
- **Location** of biome
- **Landforms** that make up your biome.
- Major **adaptations** that allow organisms to survive (not just of animals!)
- **Producers, consumers, and decomposers** that live in the biome.
- Major **threats** to biome.

What this project ISN'T:

- It's not a report of just animals found in the biome.
- It's not a simple explanation of what a biome is.
- It's not a 'cut and paste from the Internet' project - you have to have multiple sources of information.

Project Criteria:

- Produce an **interactive poster** using Glogster to teach classmates about a biome.
- You will be working in pairs.
- **All computer research and images must be approved by Mr. White or Mr. Smith!**
- No cutting and pasting - put information in own words - plagiarizing results in consequences and you will have to redo the entire project.
- Project will be presented to class on our class Weebly.
